What is a Digital Wallet?

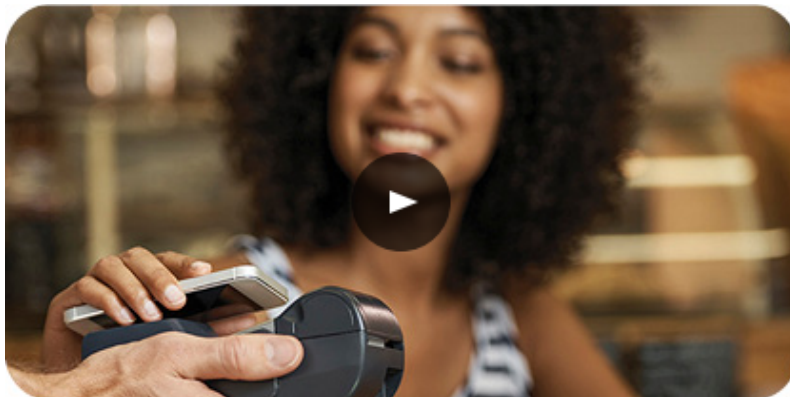

A digital wallet is simply an app for your digital device that stores your payment information so you don't need your physical wallet on hand when you make a purchase.

Using your card to pay in stores, online, or even within apps has never been easier or more secure. Simply add your card information to your digital wallet, and instead of making purchases using your plastic card, you can pay with your smartphone, tablet, or smartwatch.

Whether you're shopping in an app, online, or in store, digital wallets make your checkout faster and easier. And depending on the app, it might also be able to store ID cards, event tickets, boarding passes, gift cards and other items.

Our card is compatible with several digital wallets, including Apple Pay, Google Wallet, and Samsung Wallet. Once you've added your card to a digital wallet, simply look for the contactless card reader symbol at the checkout.

When you hold your phone next the reader, it uses your device's near-field communication technology to send an encrypted, one-time code that allows you to securely complete your purchase.

Your card number never changes hands, so both you- and your card- are protected. Some Samsung devices also include a magnetic signal, which allows them to work with traditional magnetic stripe terminals as well.

Whichever digital wallet you choose, when used with our card, you can be confident knowing your purchases carry the same fraud protections as if you used your physical card.

In fact, many digital wallet services offer additional layers of security to help safeguard your information even more, making digital wallets a fast, easy, and safe way to pay.
